STATUS

This Orange Page series is an internal candidate-observation and counsel-triage annex. It does not imply approval, ownership, inventorship, novelty, patentability, validity, infringement, enforceability, or freedom to operate.

COMPOSITION

90,000 predecessor observations plus 90,000 new R11 observations: 20,000 Teal; 16,000 Brown; 4,000 Yellow; 12,000 Purple; 12,000 Angel; 23,000 test-derived; 3,000 cross-system.

USE

Cluster related observations, identify concrete embodiments and human contributions, preserve confidentiality, run prior-art searches, evaluate enablement, and choose patent disclosure, trade-secret, copyright-expression, defensive-publication, or archive pathways.

SAMPLE CANDIDATE PATHWAYS

PIP-090006		TEAL		TP-001		INTERFACE		TIER_B_PRIOR_ART_ENABLEMENT
PIP-090007		TEAL		TP-001		CALIBRATION		TIER_A_COUNSEL_PRIORITY

PIP-090010		TEAL		TP-001		ALLOCATION		TIER_A_COUNSEL_PRIORITY

ENUMERATION

Each candidate combines a source identity with a technical lens. The combination is a search and disclosure prompt, not a distinct invention.

LINEAGE

Predecessor registers remain exact historical evidence. R11 adds only new IDs PIP-090001 through PIP-180000 and supplies a compact 180,000-row master index.

EVIDENCE CEILING

Documentation, reference code, deterministic tests, or simulation do not establish physical enablement or legal entitlement.

Teal IF/HOW/THEN pages, Brown R-lifecycle pages, Yellow visual-blueprint bundles, Purple syntax pages, and Angel Reports are analyzed as separate but cross-linked candidate-expression layers.

OPPORTUNITY

Potential value may arise from exact interface combinations, evidence ceilings, lifecycle gating, syntax-to-physics mappings, visualization, receipt graphs, and correction pathways.

REVIEW

Counsel and engineers must merge duplicates and identify actual embodiments before deciding whether a point merits legal or trade-secret treatment.

PIP-124700		BROWN		BR-368		FINANCIAL		TIER_C_TRADE_SECRET_DEFENSIVE

TESTS

Exactly 23,000 deterministic R11 scenarios each generate one candidate test-discovery observation. A passing test proves only the tested reference behavior.

POTENTIAL

Test harness structure, fail-closed conditions, calibration states, typed error handling, receipt lineage, and deterministic replay may warrant separate review.

LIMITATION

A test-derived observation is not automatically novel or patentable and does not validate physical performance.

PIP-135250	PURPLE	PP-132	ALLOCATION	TIER_C_TRADE_SECRET_DEFENSIVE

TESTS

Exactly 23,000 deterministic R11 scenarios each generate one candidate test-discovery observation. A passing test proves only the tested reference behavior.

POTENTIAL

Test harness structure, fail-closed conditions, calibration states, typed error handling, receipt lineage, and deterministic replay may warrant separate review.

LIMITATION

A test-derived observation is not automatically novel or patentable and does not validate physical performance.

TRIAGE

Internal scores are workflow aids only. They do not constitute legal ranking or a conclusion about patentability.

GOVERNANCE

Potential points stay pending. Access, disclosure, inventorship, assignments, prior art, third-party rights, public disclosure, and filing decisions require qualified review.

SCOPE

External cryptocurrency is excluded from Day-0 and Day-1. Historical candidate references remain preserved only as predecessor lineage.

STATUS BOUNDARY

No entry in this document implies approval or existence of an IP right. Candidate observations require clustering, human contribution analysis, enablement review, prior-art search, trade-secret analysis, legal classification, and qualified counsel review.

CANDIDATE COUNTS

180,000 predecessor observations + 50,000 R12 Rainbow/node/test/mirror observations = 230,000 total.

R12 DOMAINS

30,000 Rainbow-Blue; 4,750 Rainbow-Pink; 11,500 additional scenario pathways; 3,750 cross-system node/PDF-mirror pathways.

EVIDENCE CEILING

Documentation, source, reference software, and deterministic simulation only unless separate physical or legal evidence exists.

STATUS BOUNDARY

No entry in this document implies approval or existence of an IP right. Candidate observations require clustering, human contribution analysis, enablement review, prior-art search, trade-secret analysis, legal classification, and qualified counsel review.

Potential IP Points

Volume 1 of 4 - Legal Boundary, Methodology, Portfolio Map, and Counsel-Priority Review

NOT IP APPROVAL - NO OWNERSHIP, INVENTORSHIP, PATENTABILITY, OR FREEDOM-TO-OPERATE DETERMINATION

This technical review series contains 10,000 granular candidate observation points. It does not identify 10,000 distinct inventions, claims, patents, or approved rights. Each point may overlap another point, prior art, public-domain material, ordinary engineering practice, third-party rights, or unprotectable subject matter. Qualified IP counsel, prior-art searching, inventorship review, and enablement review are required before relying on any point.

Build candidate: MJ-PBMEF-DAY0-R6-IP-REVIEW-CANDIDATE
Prepared: 2026-08-03
Approval effect: NONE
Ownership effect: NONE
Passkey status: STAGED PENDING EXPLICIT FOUNDER FREEZE

1. Four-batch Potential IP Points sequence

Batch	Title	Function
POTENTIAL-IP-POINTS/01	Legal boundary and source normalization	Preserves the exact source corpus, defines the no-approval boundary, and normalizes formulas, families, objects, products, white papers, and Bangel constructs.
POTENTIAL-IP-POINTS/02	10,000-point technical enumeration	Creates formula/lens, family/object, product/construct, white-paper, and portfolio candidate observation points.
POTENTIAL-IP-POINTS/03	Cross-reference, clustering, and triage	Adds Pink Paper and Batches 1-4 references, protection-mode options, risk flags, search terms, enablement gaps, and internal priority tiers.
POTENTIAL-IP-POINTS/04	Pre-passkey documentation integration	Stages the series, registers, source methodology, and QA receipts inside the official documentation manifest and candidate passkey scope.

2. Source corpus and enumeration mathematics

The register cross-references the controlling Day-0 corpus rather than generating stand-alone legal conclusions. The enumeration is deliberately granular so counsel can merge, reject, or split points without losing source lineage.

Source layer	Calculation	Points
Formula/lens	145 formulas x 20 technical lenses	2,900
Family/object	21 families x 39 objects x 4 relationship modes	3,276
Product/construct	28 products x 20 Bangel constructs x 5 modes	2,800
White-paper opportunity	61 white papers x 16 disclosure lenses	976
Portfolio cross-cutting	48 themes	48
Total		10,000

3. Legal and status boundary

Patent evaluation is claim-specific. A technical observation must still be reviewed for eligible subject matter, utility, novelty, non-obviousness, written description, enablement, definiteness, inventorship, and prior art.

A provisional application establishes a filing date only for what is adequately described and must include drawings when necessary. A later nonprovisional generally must be filed within twelve months to claim the provisional's benefit.

Copyright can protect original code, prose, diagrams, and compilations, but not the underlying ideas, systems, methods, mathematical principles, formulas, or algorithms.

Trade-secret treatment requires value from secrecy and reasonable measures to preserve secrecy. Public disclosure may change the available protection strategy.

This register is not a freedom-to-operate opinion, an ownership or inventorship determination, a valuation, an approval to file, or an authorization to disclose confidential material.

4. Candidate taxonomy and protection-mode options

Mode	What the register means	Required caution
Utility or software patent review	A possible method, system, apparatus, data structure, control, or measurement disclosure.	Patentability and eligibility are not determined; concrete embodiments and prior art are required.
Design-patent review	A possible ornamental or interface configuration requiring drawings.	Functional geometry alone is not a design right; novelty and ornamentality must be reviewed.
Trade-secret review	Potentially valuable confidential know-how, parameters, process order, calibration, or configuration.	Reasonable secrecy measures and access control are required.
Copyright-expression preservation	Original code, prose, diagrams, tables, and compilation choices.	Underlying methods, systems, formulas, and ideas are not protected by copyright.
Trademark or brand search	Names, source identifiers, logos, and market-facing designations.	Search, use-in-commerce, distinctiveness, and conflict review remain necessary.
Defensive publication	A deliberate public technical disclosure to preserve access or create prior art.	May sacrifice patent and trade-secret options; counsel approval is required before publication.

5. Internal triage results

Tier	Count	Meaning
TIER_A_COUNSEL_PRIORITY	98	Highest internal review priority; not a patentability conclusion.
TIER_B_PRIOR_ART_AND_ENABLEMENT	1,597	Potentially material, but source support, embodiment, and prior art require substantial review.
TIER_C_TRADE_SECRET_OR_DEFENSIVE_REVIEW	6,103	Often better suited to confidential know-how, expression, defensive publication, or portfolio clustering.
TIER_D_MERGE_ARCHIVE_OR_EXPRESSION_ONLY	2,202	Likely repetitive, ordinary, high-risk, or expression-only; retain lineage but merge or archive unless counsel finds a distinct angle.

The score is a deterministic reading aid, not a legal opinion or valuation.

6. Counsel-priority candidate profiles - Top 250

These profiles are the highest-scoring internal candidates. They remain unreviewed observations. A high score may reflect project-specific integration and source specificity, but it does not establish novelty, patentability, ownership, or enforceability.

7. Founder and counsel action sequence

- 1. Preserve the register and source corpus confidentially; do not publish before trade-secret and patent-strategy review.
- 2. Select a small number of coherent technical families rather than treating every granular point as a separate filing.
- 3. For each selected family, identify actual human contributors and preserve dated source evidence.
- 4. Prepare an enabling technical disclosure with concrete embodiments, alternatives, drawings, tests, and failure cases.
- 5. Run patent and non-patent prior-art searches using the provided search phrases and professional classification searching.
- 6. Choose among provisional filing, nonprovisional preparation, trade-secret hold, copyright registration, trademark search, defensive publication, or archive.
- 7. Update the register only through a successor change-intake record so the first passkey retains an exact review snapshot.

8. Passkey relationship

This series is staged for the final Pre-Day-0 documentation scope. The founder approval phrase freezes the approved documentation manifest and regenerates the final repository root, collection root, eligibility receipt, and ceremony kit. The passkey can authenticate the exact register and its limitations; it cannot create or approve an IP right.

Exact approval phrase

the documents look good, i agree, lets execute the passkey

Potential IP Points

Volume 2 of 4 - Formula, Algorithm, Physics, and Engineering Candidate Register

PIP-00001 through PIP-02900

**IMPORTANT: THIS REGISTER DOES NOT APPROVE OR CREATE IP RIGHTS.
NO OWNERSHIP, INVENTORSHIP, PATENTABILITY, NOVELTY, NON-OBVIOUSNESS,
FREEDOM-TO-OPERATE, REGISTRATION, VALIDITY, OR ENFORCEABILITY DETERMINATION.**

MJ-PBMEF-DAY0-R6-IP-REVIEW-CANDIDATE | FORMULA / 20 TECHNICAL LENSES

Volume 2 of 4 - Formula, Algorithm, Physics, and Engineering Candidate Register

Entries in this volume: 2,900.

Each row is a granular candidate observation point, not a distinct invention or approved claim.

The full JSON/JSONL/CSV register contains detailed technical theses, disclosure prompts, search terms, enablement gaps, risk flags, and actions.

Use the point ID to cross-reference the machine-readable register and the Pink Paper / Batch documents.

Triage scores are internal reading aids only and must not be used as patentability, ownership, valuation, or legal conclusions.

NOT IP APPROVAL - NO OWNERSHIP, INVENTORSHIP, PATENTABILITY, OR FREEDOM-TO-OPERATE DETERMINATION

Potential IP Points

Volume 3 of 4 - Family, Object, Interface, and Architecture Candidate Register

PIP-02901 through PIP-06176

**IMPORTANT: THIS REGISTER DOES NOT APPROVE OR CREATE IP RIGHTS.
NO OWNERSHIP, INVENTORSHIP, PATENTABILITY, NOVELTY, NON-OBVIOUSNESS,
FREEDOM-TO-OPERATE, REGISTRATION, VALIDITY, OR ENFORCEABILITY DETERMINATION.**

MJ-PBMEF-DAY0-R6-IP-REVIEW-CANDIDATE | 21 FAMILIES x 39 OBJECTS x 4 MODES

Volume 3 of 4 - Family, Object, Interface, and Architecture Candidate Register

Entries in this volume: 3,276.

Each row is a granular candidate observation point, not a distinct invention or approved claim.

The full JSON/JSONL/CSV register contains detailed technical theses, disclosure prompts, search terms, enablement gaps, risk flags, and actions.

Use the point ID to cross-reference the machine-readable register and the Pink Paper / Batch documents.

Triage scores are internal reading aids only and must not be used as patentability, ownership, valuation, or legal conclusions.

NOT IP APPROVAL - NO OWNERSHIP, INVENTORSHIP, PATENTABILITY, OR FREEDOM-TO-OPERATE DETERMINATION
